Office Action Summary

Art Unit: ~~1761~~ 1711

1. A response (paper no. 9) has been filed on January 28, 2003.

Claims under examination are still 1-17, 28, 29 and 32-36.

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

3. Claims 1-17, 28, 29 and 32-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gibbs (USP 3406223) in view of Fukumoto et al (USP 5603927) and Shinohara et al (USP 5866671).

Please refer to item 5, prior office action, paper no. 7 for this rejection.

4. Applicant's arguments filed January 28, 2003 (paper no. 9) have been fully considered but they are not persuasive.

Applicants' argument that "Gibbs discloses the use of amino compounds not to reduce formaldehyde odor" (page 1 of above paper no. 9) is not persuasive because it is quite likely that Gibbs' use of amino compounds reduces the formaldehyde odor as well as improves hydrolytic stability. Please note that Gibbs composition reads on the instantly claimed composition.

While tertiary butylamine of Gibbs, as the applicants state, may not be suitable for instant invention, there are few other amines of Gibbs (in col. 2, lines 58-67) which may be suitable. Furthermore it is the compounds of Fukumoto (not of Gibbs) that are considered by the examiner to be more suitable for removing formaldehyde odor.

Fukumoto teaches pkb of 9.4 or more. This is outside the claimed range of 2-8. It is the examiner's position that is within the expertise of one to vary this value in order to produce desired end product/composition and that the applicants have not established criticality of the claimed range viz 2-8.

Applicants' argument (on page 2) that "instant invention does not use an acid salt" is not understood. What is an acid salt? A salt is formed from an acid and a base. How is an "acid salt" different from a "salt"?

Applicants' next argument that "Fukumoto removes odors such as tobacco in vapor phase" is not persuasive since Fukumoto in col. 6, lines 2-3 removes aldehydes which includes formaldehyde.

Applicants' comment that "Fukumoto and Shinohara do not disclose removal of superpolyamide of Gibbs" is true but not relevant since Fukumoto does not have to disclose such removal.

Applicants' argument about Shinohara that "the mechanism of removal of formaldehyde by Shinohara is different from the one in instant invention" is also not persuasive since none of the instant claims encompass any limitation/s based on mechanism.

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is

filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to U.K. Rajguru whose telephone number is 703-308-3224. The examiner can normally be reached on Monday-Friday from 9:30 am to 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James J. Seidleck can be reached on 703-308-2462. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9310 for regular communications and 703-872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0661.
